SUMMARY

Full-Stack Developer with hands-on experience building enterprise ERP systems, financial reporting, and internal business applications at a securities company. Works across frontend, backend, and database layers with Next.js, React, Go, Spring Boot, NestJS, C# (.NET), PostgreSQL, and SQL Server, with a background in UX/UI design.

EXPERIENCE

IT Developer — AIRA Securities Public Company Limited

Jun 2026 – Sep 2026 (4 months) · Full-time

ERP System Development (Aug – Sep 2026) — HR, CRM, Procurement, Warehouse, and Accounting modules

- Built features end to end from business requirements: UI, REST APIs, business logic, and PostgreSQL queries; created reusable data tables, forms, and modals with filtering and pagination.
- Brought features started by senior developers to production quality (UI states, validation, edge cases, responsive layouts) across multi-step flows: Sales → Quotation → Project → Procurement → Warehouse → Accounting.
- Fixed bugs across the frontend, backend, and database at the root cause, adding tests to prevent regressions; built mobile screens for warehouse, transport, and on-site receiving staff.
- Performance: cut the employee directory's initial load from ~7 MB to ~1.8 MB (previously ~270 requests / ~57 MB when scrolling the full list) and asset-requisition uploads from ~1 MB to ~200 KB via lazy loading, client-side image compression, and HTTP caching (ETag / 304).

Tech: Next.js, React, TypeScript, Tailwind CSS, Go, Spring Boot, PostgreSQL, REST API, Docker, GitHub

Enterprise Application Development (Jun – Jul 2026)

- Developed a centralized Authentication & RBAC portal unifying user search across 10+ internal systems; analyzed auth and RBAC workflows across 14 systems.
- Built a data aggregation service combining the SBA database and external APIs to calculate customer net balances, with scheduled monthly processing and automated report files.
- Enhanced TFEX MIS Report R2643 across SQL Server schema, XML import, backend processing, and CSV export; added Cost Value, Market Value, and Other Collateral Movement data.
- Produced 6 quarterly Accounting Audit reports (Q2 2026) consolidated from SQL Server, Smart System, and TFEX MIS.

Tech: C# / .NET, NestJS, React, PHP, SQL Server, REST API, Cron Jobs, XML, CSV

Frontend Developer & UX/UI Designer (Intern) — indistinct

Aug 2025 – Feb 2026 (6 months) · Remote

- Designed wireframes and user flows in Figma / FigJam and system sequence diagrams in Mermaid.
- Developed responsive, component-based web interfaces with Angular and Tailwind CSS in an agile, fully remote team.

EDUCATION

Bachelor of Engineering (B.Eng.) in Computer Engineering — Pibulsongkram Rajabhat University

Cumulative GPA 3.59 / 4.00 (Second Class Honors) · Major GPA 3.68

SELECTED PROJECTS

- AURA – AIRA User Rights Auditor:** IAM platform with unified employee search across 10+ systems, JWT auth, RBAC, parallel data retrieval, audit logging, and legacy Informix integration. *React, NestJS, Prisma, SQL Server, C#*
- POS & Backoffice System:** sales interface plus inventory/user management with JWT and Admin/Staff roles, deployed with Docker, Nginx, Jenkins CI/CD on GCP behind Cloudflare. *React, Express, PostgreSQL*
- Orange Cat Lotto System:** lottery management with ticket inventory, bonus checking, shipments, and financial reports. *React, NestJS, Prisma, PostgreSQL (Supabase), Vercel, Render*
- Focus Pulse:** productivity app with Pomodoro timer, analytics dashboards, and Supabase auth with 2FA TOTP. *Next.js, NestJS, Prisma, PostgreSQL*

SKILLS

Frontend	Next.js, React, Angular, TypeScript, Tailwind CSS, Bootstrap 5
Backend	Go, Spring Boot, NestJS, Node.js / Express, C# (.NET), PHP, REST API, GraphQL, Swagger
Database	PostgreSQL, SQL Server, MongoDB, Supabase, Prisma
DevOps & Tools	Git / GitHub, Docker, Nginx, Jenkins, GCP, Cloudflare, Vercel, Netlify, Render
Design	Figma, FigJam, Mermaid
